

# TOTAL CONTROL WAN

Total Control WAN allows you to take control of your entire network while gaining operational efficiency, lower costs, QoS, and secure, simple management.

## Software-Defined Wide Area Networking (SD-WAN)

- Standardize across all your sites
- Centralized network management
- Policy-based QoS & traffic routing
- Connectivity aggregation
- Application prioritization
- Zero-touch provisioning
- Detailed analytics

# YOUR NETWORK IS YOUR BUSINESS

Total Control WAN from NetFortris is a fully managed network solution which aggregates and maximizes all bandwidth resources, regardless of access type and size. Mission critical applications get the priority and QoS they need, and can be adjusted at any time. That means your business operations can leverage connected technology to sell and service your customers, partners and employees better, without compromising security, privacy, or control.

Our engineers will design the best network solution for your business and give you total control through Total Control WAN from NetFortris.

NetFortris provides flexible, scalable, cloud-based voice and data communications customized with the exact security and compliance your business needs.

Multi-level protection, cloud-based backup and bi-directional failover ensure business continuity while big data analytics with real-time service control improves your operational performance. NetFortris also serves its customers with carrier-grade networks, business and communications applications, and expert service. Our solution engineers work with you to design a fully managed and automated system tailored for your business.

## BENEFITS AT A GLANCE

### Maximize Bandwidth and Save Money

Get significant cost savings while multiplying your bandwidth. Take advantage of all access types; from private, public, to wireless connectivity. Total Control WAN is truly access agnostic for all your business needs and branch requirements.

### Centralized Management

An intuitive cloud portal allows for easy policy changes and application prioritization - whether globally or by connection, location, application, device or user. Plus, a deep analytic engine for unparalleled visibility into your network.

### Simplified Network Deployments

Universal form factor and zero touch provisioning takes deployment time down from hours to minutes. No truck rolls!

### Robust Quality of Service and Resiliency

Seamless failover by aggregating links with automatic load balancing, application priority, and forward error correction. Protect business critical applications such as voice with personalized QoS policies.
